

IN THE ABSTRACT:

An aerosol composition which is prepared from a biliquid foam, an aqueous phase and a propellant. ~~The incorporation of, and wherein~~ an oil soluble functional material is incorporated into the biliquid foam during ~~the preparation of the aerosol composition enables to enable~~ this material to be more readily incorporated into the composition. The aerosol composition can be contained in a pressurized aerosol can and can be a polish, an air freshener, a repellent, a pre- or post-shave preparation, a shaving preparation or a follicle softener.
